

SMART SERVICE ADDED VALUE IN INVESTMENT CASTING.

BLANK-ID

Functional integration

SMART SERVICE.

We offer more than just investment casting.

We design your part through varied optimization approaches and services.

Our services:

BLANK-ID

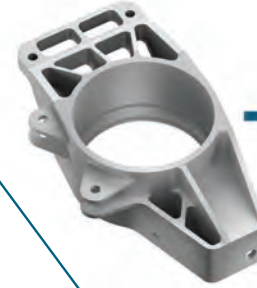

Complete traceability of all manufacturing information of your part over the whole product lifetime! The BLANK-ID makes this possible by means of an integrated codemark.

Functional integration

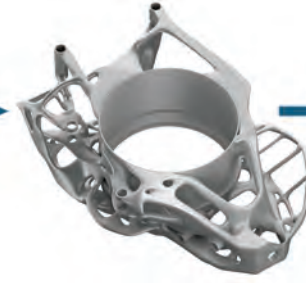

Fully machined parts? The manufacturing of an optimized part geometry by investment casting is often more efficient and therefore more economical. We offer near-net shapes through our casting process that eliminates the need for extensive machining.

Lightweight construction

Original part

Optimized geometry after simulation

Optimized geometry by casting

Lightweight construction

Saving weight through lightweight design – by means of modern simulation programs including topology optimization, we render your investment casting part lighter and therefore more cost-efficient.

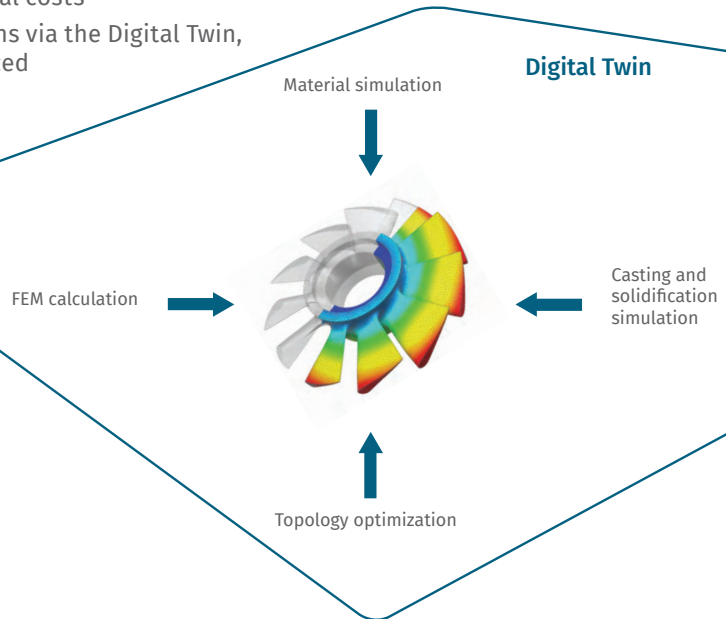

Digital Twin

Recognizing and using potentials for improvement before an investment casting part is even produced! Thanks to Digital Twin by FEINGUSS BLANK this smart approach is now reality!

THE WORLD OF UNLIMITED POSSIBILITIES IN INVESTMENT CASTING.

Your advantages:

- / Benefit from collective know-how, innovative simulations and latest technology
- / Reduction of part weight and material costs
- / Through optimization and simulations via the Digital Twin, serial production costs can be reduced
